## **Construction on the Skidaway Narrows Bridge**

SAVANNAH, GA (May 4, 2016) – Work will be performed on the Skidaway Narrows Bridge that will enhance the new structure and ensure the long-term performance of the bridge. Georgia DOT is working closely with the contractor and independent engineers to evaluate enhancements as the end of the construction work approaches.

Work began Monday, May 2, 2016, and may continue through late June. The current phase is concentrated below the bridge surface and impacts to motorists will be minimal.

The next phase will be sealing portions of the concrete deck located in the main span unit. This is tentatively set to begin June 13, 2016, and will require temporary lane shifts for a period of about a week. During the lane shifts, two lanes will remain open at all times with traffic shifts alternating lanes.

The contractor is expected to complete all necessary work by June 30, 2016. In the future, as is standard practice, the bridge will be inspected every two years per the bridge inspection schedule.
